

Our goal is to create an Instore App that generates business within a defined, limited area.

VIEW CASE STUDY

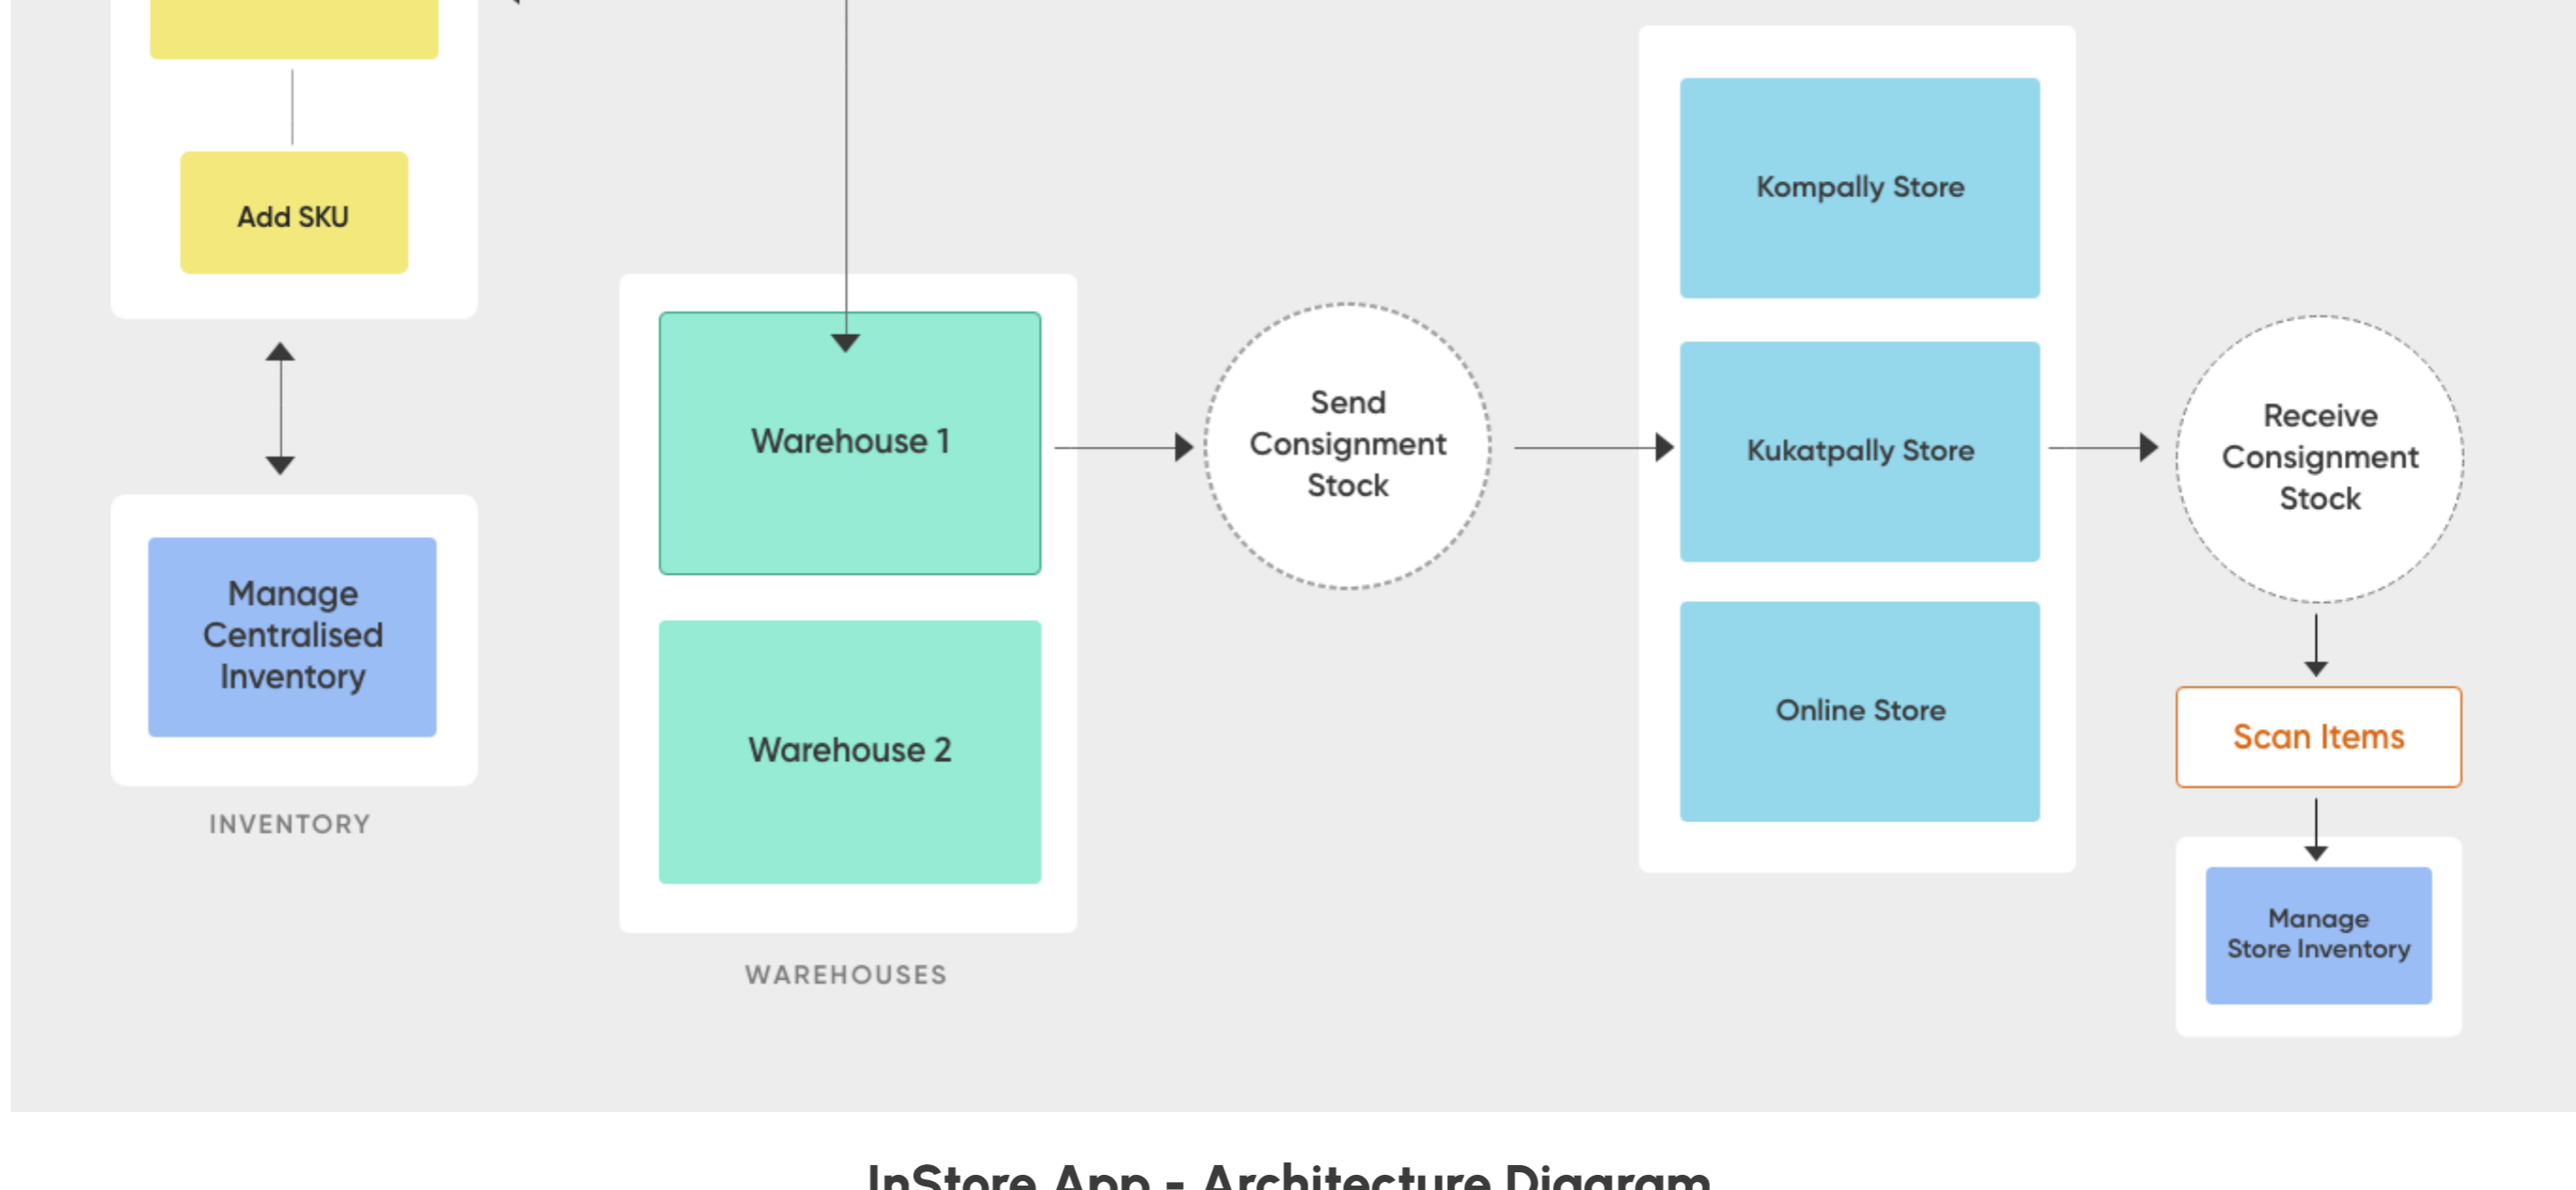

Project Name  
Wallie

Type of Service  
Web Application, Mobile Application

### The Situation

At Wallie, our aim is to ensure that all reflections are overwhelmingly positive – we inspire every individual to embody positive energy, optimism, a cool attitude, and supreme confidence.

Our Client has conceived the idea of creating an Instore App, to be integrated directly within the store premises, allowing Customers to access it for shopping. Instead of investing in expensive multiple branches, our Client opted to rent smaller areas and equipped them with columns containing iPads featuring this App for shopping. The App offers complete PoS solutions along with Warehouse and Inventory Management capabilities. Additionally, Customers have the option to request a trial either in the Store App or the Online Store App.

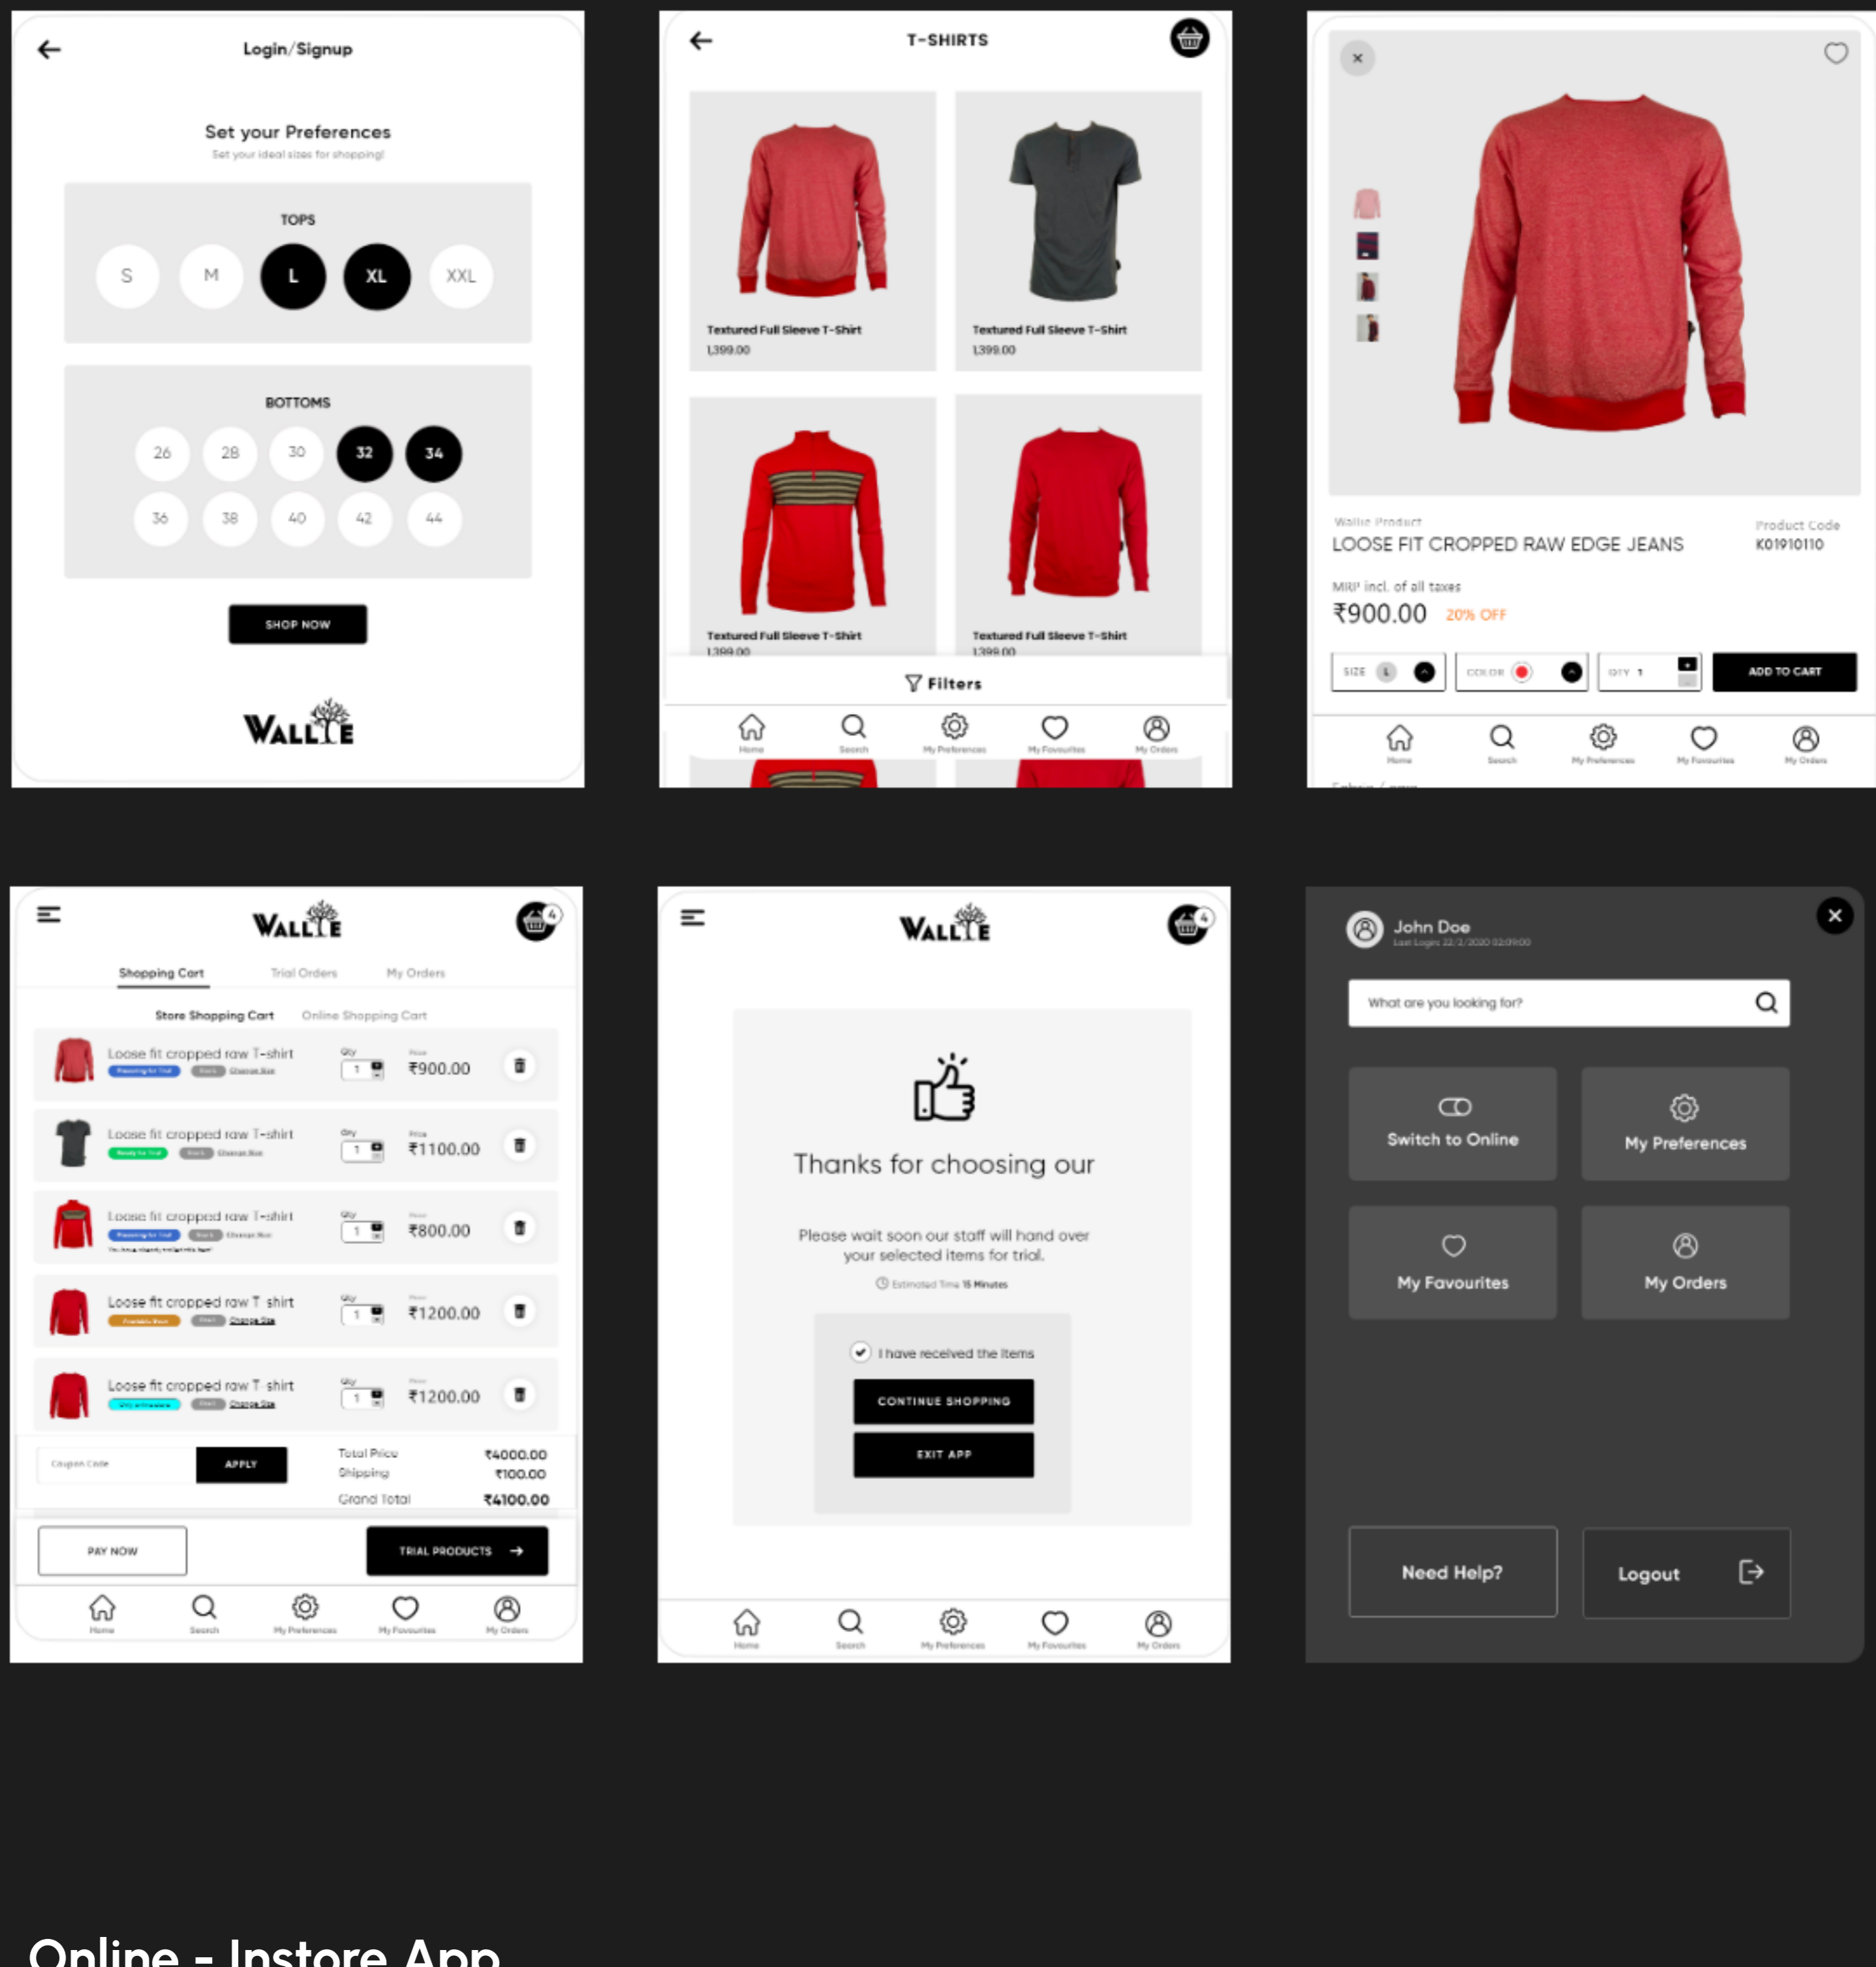

InStore App - Architecture Diagram

### The Solution

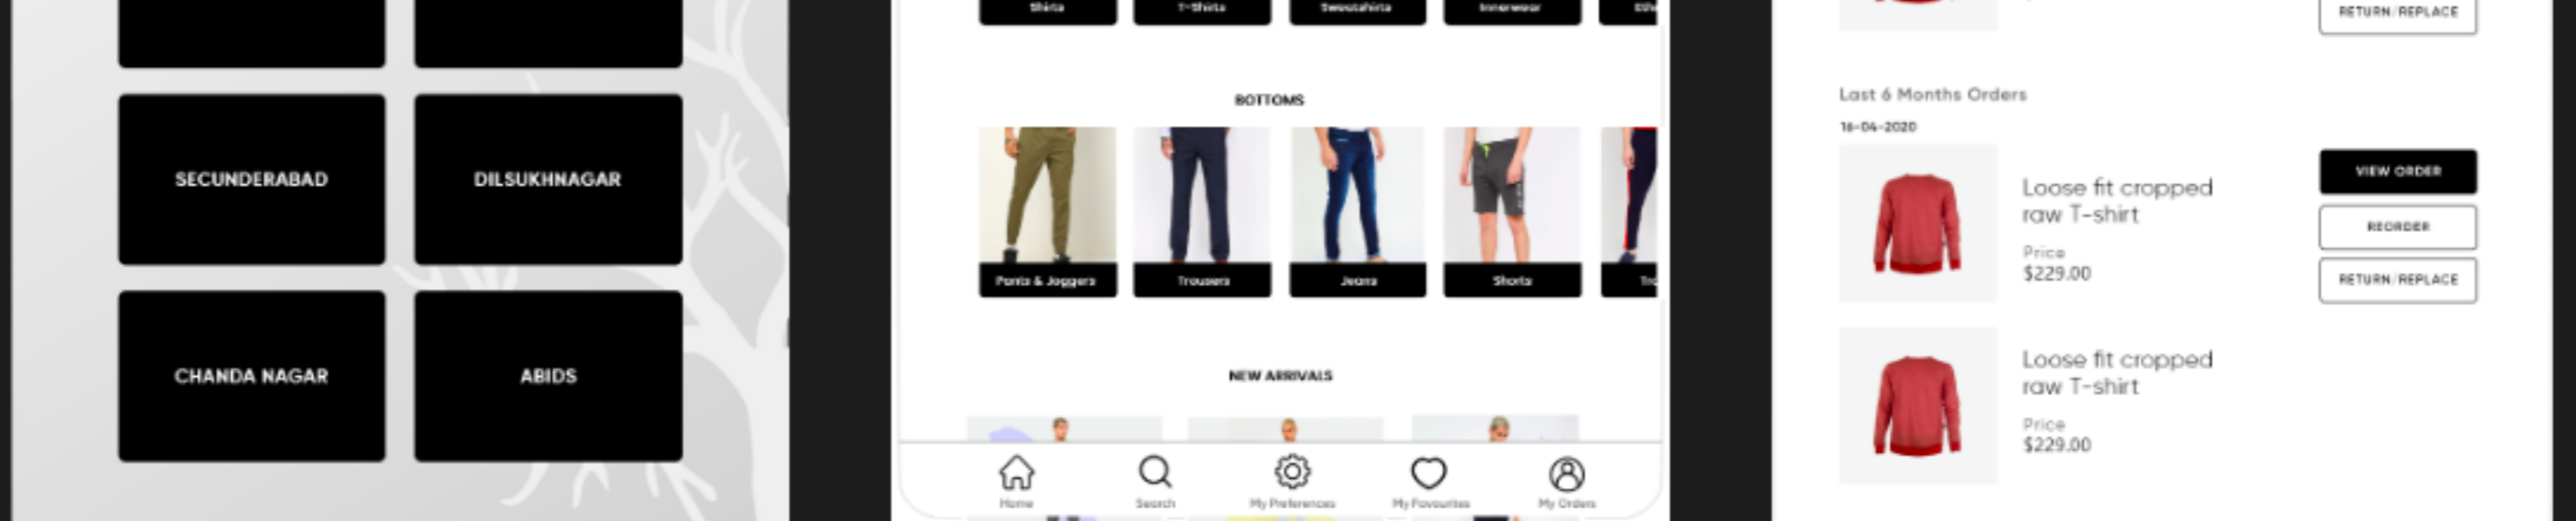

We offer a comprehensive solution that allows the Client to easily set up this Application on their existing stores. Our solution provides complete assistance, ranging from Inventory management to PoS setup, and includes various other features like Warehouse Stock management, Online-Instore Stock Management, and a Delivery Boy App.

Customers can conveniently experience the product through our integrated Inshore-Online Store Apps.

### Billing Counter - PoS App

### Billing Counter - PoS App

### The Success

The entire system is now equipped with Administrator access, effectively resolving the challenge of enabling Store-wise Booking through the Application installed on the iPad within any branch.
